Kaya clinical summary

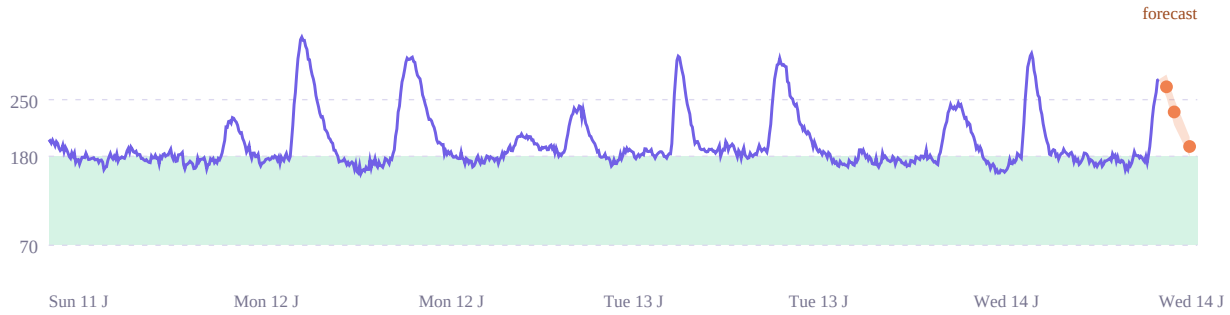
Patient 1705
Generated 18 Oct 2026 14:07

Synthetic patient. Decision support for clinicians; not a diagnostic device and not clinically validated.

Patient	74 y, female; BMI 25.1; waist 80 cm	**Diabetes**	2.9 years; HbA1c 8.5%; BP 126/75
Treatment	Metformin	**Genetics**	PNPLA3 G alleles 2; TCF7L2 T alleles 0
Priority	**MEDIUM**	**Why flagged**	Time in range 42%; Advanced fibrosis risk 36%; 6 alert(s) in the last 24 h

Glucose now and the next 2 hours

Now	In 30 min	In 60 min	In 120 min	High within 2 h	Low within 2 h
275 mg/dL	266 (253-281)	235 (218-251)	192 (180-204)	99%	0%



Last 3 days of CGM with the twin's forecast (median and 80% range) from the latest reading. Healthy range 70-180 mg/dL shaded.

14-day glucose profile

Time in range	Above 180	Below 70	Variability (CV)	Mean glucose	Est. HbA1c
42%	58%	0.0%	18%	196 mg/dL	8.0%

Organ risk

Organ	Finding	Evidence
Liver	Steatosis risk 19%, 26% at 12 months at current habits. Advanced fibrosis 31.4%, 35.5% at 12 months. Last FibroScan 11.9 kPa; FIB-4 2.2.	Baseline: model validated on real NHANES FibroScan data (AUROC 0.83). 12-month drift from glucose habits: simulation.
Eyes	No retinopathy (grade 0). Two-year progression risk 6%.	Image grader validated on APTOS (kappa 0.89) and Indian IDRiD (0.71 after fine-tuning). Progression risk: simulation.
Kidneys	eGFR 65, UACR 12 mg/g. Albuminuria risk 30% now, 33% at 12 months. eGFR about 56 in 5 years (1.7 per year); reaches 60 in about 2.9 years at this rate.	Risk model validated on real NHANES data (AUROC 0.76 albuminuria, 0.85 reduced eGFR). eGFR path: simulation.

What the twin suggests

Scenario (simulation)	Time in range	Liver fat risk, 12 m	eGFR in 5 y	Eye progression, 2 y
Current habits	42%	26%	56	6%
Walk 20 min after meals	43%	18%	57	4%
Smaller carb portions (-25%)	43%	23%	57	5%
Medication optimised (-15 mg/dL)	69%	18%	57	3%
All three together	71%	11%	58	2%

Effect sizes are literature-informed assumptions shown for transparency; this is a simulation to support a conversation, not a prediction of outcome.

Alerts, last 24 hours

When	Alert	Why
Wed 14 Jan, 20:45	High glucose expected (100%)	Glucose 178 and steady, no recent meal logged.
Wed 14 Jan, 18:40	High glucose expected (87%)	Glucose 178 and steady, no recent meal logged.
Wed 14 Jan, 12:05	High glucose expected (93%)	Glucose 168 and steady, no recent meal logged.
Wed 14 Jan, 06:50	High glucose expected (99%)	Glucose 177 and steady, no recent meal logged.
Wed 14 Jan, 04:50	High glucose expected (87%)	Glucose 175 and steady, no recent meal logged.
Wed 14 Jan, 02:50	High glucose expected (90%)	Glucose 179 and steady, no recent meal logged.

Kaya is an open-source research prototype built on open and synthetic data (CGMacros, NHANES, APTOS, IDRiD). Forecasts and risks are estimates to support clinical judgement. Simulations are labelled and their assumptions are editable.
